

A: TEAM-63/Navbar creation

B: TEAM-68/Landing page styling

C: TEAM-3/Applicant upload video portfolio

D: TEAM-6/Applicant upload tailored elevator pitch

E: TEAM-60/Applicant fill in job application

F: TEAM-5/Applicant view job description

G: TEAM-58/Employer design job details

H: TEAM-62/Register with email verification

I: TEAM-64/Profile page and general styling

For this sprint, our critical path is identified by nodes C, E, and F which are required to work on node D. The tasks associated with them involve multiple facets of the job application process on our web app. We actually split node F into 3 separate user stories after last sprint when we realized that the user story associated with node F was too broad resulting in 3 separate user stories. To accommodate the increase in user stories, we started this sprint as early as possible by

starting work on nodes C and F and later E. The other nodes are otherwise unrelated to the critical path once again giving us a good amount of flex time for this sprint. Because we started this sprint so early, we were able to finish all of our work and start planning the work for the next sprint.
