

Sprint 3 burndown

This is our burn down chart for sprint 3. Our burndown chart for sprint 2 is below for comparison. The sprints look markedly different because we started our work earlier this sprint and were much more organized. However, our sprint ran long because we were unable to move the last few tasks to done at 11:45PM because the course website went down along with JIRA. In all technicality our user stories are done but they require some modifications to meet our definition of done hence our story points did not make it to 0 this sprint. We also had a slightly higher velocity this sprint so we had to contend with that matter as well (47 story points for this sprint vs. 42 for last sprint).

Sprint 2 burndown
