

## Sprint 3 documentation

### Goal:

For sprint 3, we're focusing on damage control due to issues with our user stories in sprint 2. To this end we've taken up the user stories that we didn't finish in sprint 2 for sprint 3. After some discussion, we decided that one of our sprint 2 user stories were too broad in scope so we worked to split it into smaller, more manageable user stories for a total of 5 user stories.

### Participants:

Ahmed Elkady, Juefei Lu, Faizan Riaz, Xiaohan Lu, Parth Solanki, Tien-Thanh Le, Vanshika Virmani

### Team capacity:

Like in our previous 2 sprints, we used a Fibonacci sequence to estimate our user stories via scrum poker. Since 2 of our user stories were already estimated for this sprint, we only had to estimate the new ones. Our total team capacity for this sprint is 47.

### User stories and task breakdown

User Story	description	Sub-tasks
As an applicant, I want to upload a 30 to 90 second video from my device so that it is displayed with my profile for others to view. (difficulty = 13)	Need to implement connection to implement some form of video storage and include a link for prerecorded videos	<ul style="list-style-type: none"><li>• Create video storage link</li><li>• Create upload service to upload videos</li></ul>
As an applicant, I want to view the key skills and responsibilities that are described for each job, so that I can create a tailored elevator pitch. (difficulty = 8)	Need to be able to select jobs presented on the job board and bring them up in an expanded window to show job requirements	<ul style="list-style-type: none"><li>• Create job application endpoint</li><li>• Create database for applied jobs</li></ul>
As an employer, I want to be able to set which questions to ask the	Need to create a form to enter job details and questions	<ul style="list-style-type: none"><li>• Create job posting process including the data entry form</li></ul>

applicant when they apply		
As an applicant, I want to be able to answer questions posed by the employer during the application process	Need to make job application form to fill in employer questions and allow uploading of resumes	<ul style="list-style-type: none"> <li>• Create data entry form to answer questions posed by the employer</li> </ul>
As an applicant, I want to upload 'tailored elevator pitches' from the device to individual job applications.	Need link to record/upload a tailored elevator pitch during the application process	<ul style="list-style-type: none"> <li>• Create upload link for tailored elevator pitch</li> </ul>

There were no spikes for this sprint

#### **Decisions about user stories:**

- We decided to pivot away from using AWS S3 to storing data locally for now under the assumption that this site would be running on a server that would store the videos and files on the same device.
