A: TEAM-74: create frontend for shortlist

B: TEAM-72: filter shortlist via elevator pitch

C: TEAM-61: handle apply functionality

D: TEAM-73: create shortlist algorithm

E: TEAM-75: display full applicant list

F: TEAM-44: create link to upload tailored elevator pitch

G: TEAM-80: backend for viewing resume and elevator pitch

This sprint was started late due to extenuating circumstances regarding scheduling issues with our group members. That said, we worked to keep the sprint on schedule by starting all critical tasks first starting with nodes C and F since they were almost complete from the previous sprints. Those were left in the hands of the group members that started working on those nodes from previous sprints. As for nodes B, D, and E, we used the sprint planning meeting to decide how to prioritize them. Overall, the critical path for this sprint starts with nodes C and D. As of the time this document was uploaded (18/11/2021), we are on track to finish all of our work for the sprint.
