Team Anything Works: Sprint 1 retrospective

Practices we should continue:

- Rapid responses to discord communication and updates

- Consistently meeting and working together on assigned tasks on discord

- Consistent encouragement to improve our work

Practices we should discontinue:

- Improper use of JIRA

- Writing code without comments

Harmful practices:

- Leaving the sprint tasks to the last minute

Best experiences:

- The meetings and how organized we were

- Communicating with the product owner and keeping him informed of our progress

Worst experiences:

- leaving our sprint tasks to the last minute

- setting up all the required software for our project

Unfinished tasks:

- general testing for bugs and other issues regarding connectivity between backend and frontend components (we already have a JIRA task set for this)

Participants

- all team members (Ahmed, Xiaohan, Juefei, Vanshika, Tien, Faizan, and Parth) attended this meeting and contributed to the product owner status report and retrospective meeting.
